

# Harsh Environment Motor

Superior performance in defeathering/picker applications

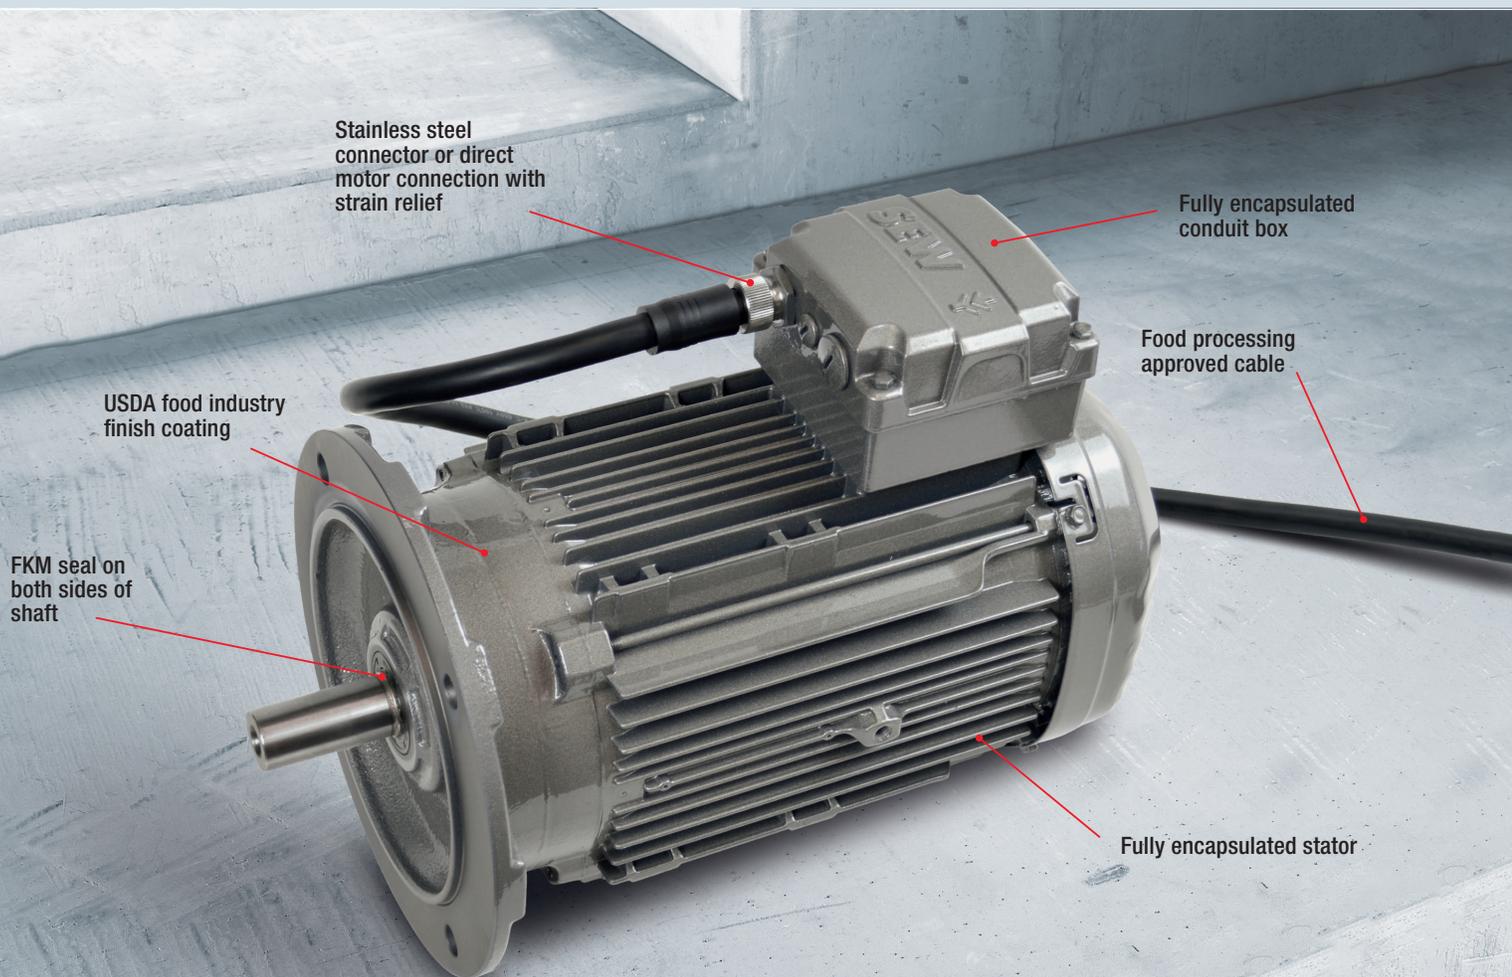

## The ideal solution for harsh washdown environments

Picking/defeathering areas are the harshest environments in poultry processing facilities. Because these areas are not sanitary, daily high pressure washdown is required. These extreme conditions can cause serious motor damage due to ingress of water and other solid contaminants, resulting in a 6 to 8 week average life expectancy for a common picker motor.

Typical motor failures in washdown environments include single phasing, shorted windings, shorted conduit box connections, and bearing failures due to water or excessive overhung load on the output shaft.

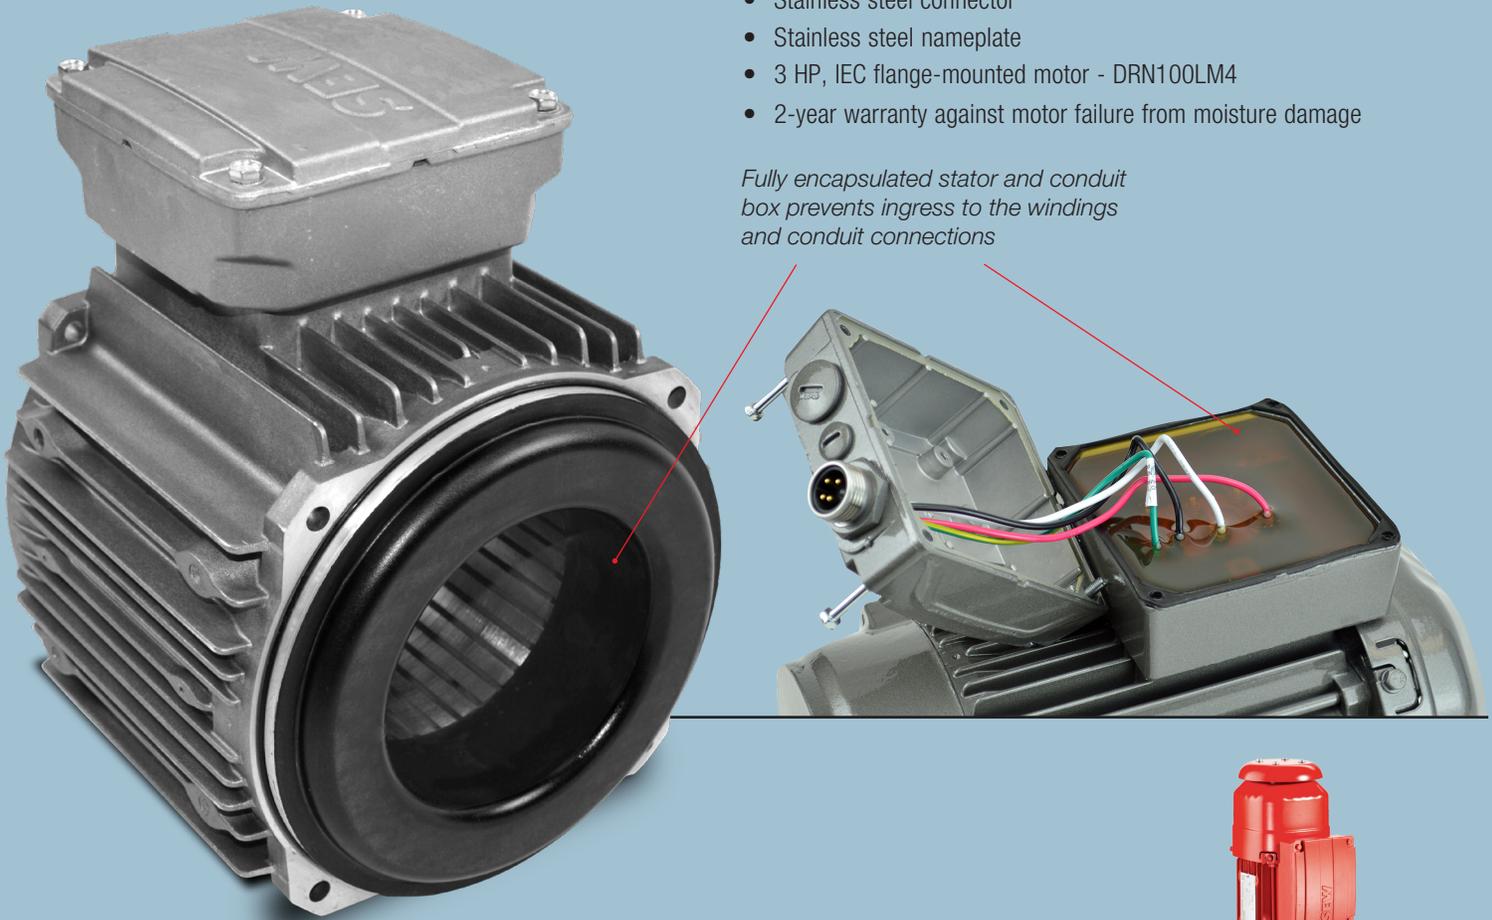

The SEW-EURODRIVE Industry Option Package (IOP) protects the internal components and has a significantly longer life in poultry processing environments.

**Feather picker motor features include:**

- Fully encapsulated inverter duty stator
- Fully encapsulated conduit box
- FKM seal on both sides of the shaft
- Multi-layered coating process
- Food processing approved power cable - 20'
- Stainless steel connector
- Stainless steel nameplate
- 3 HP, IEC flange-mounted motor - DRN100LM4
- 2-year warranty against motor failure from moisture damage

*Fully encapsulated stator and conduit box prevents ingress to the windings and conduit connections*

**Special food industry finish coating**

SEW-EURODRIVE has developed a multi-layered finish coating process specifically for the food industry. The food coating provides additional protection from the harsh environments common in poultry processing.

Available configurations:

Part No.	Voltage	Connection	Cable Length
Q414730813	460V	Direct w/strain relief	20 ft.
Q414730816	460V	Stainless steel connector	20 ft.
Q414730822	230V	Direct w/strain relief	20 ft.
Q414730827	230V	Stainless steel connector	20 ft.
