

DriveRadar® IoT Suite for applications

Condition monitoring and predictive maintenance from SEW-EURODRIVE

POSSIBLE USES / TYPICAL APPLICATIONS

Materials handling technology

Hoists

Storage and retrieval systems

THE ADVANTAGES AT A GLANCE

Effective monitoring!

Early warnings about critical changes in condition and abnormal operating performance, and identification of trends through continuous monitoring and intelligent mapping.

Increased productivity!

Prevention of unscheduled downtime thanks to transparency regarding the condition and operating performance of the drive technology, machinery, and systems.

Quick implementation!

Simple retrofitting without additional sensors and suitable for old and new systems alike.

Conserving of resources!

Optimal utilization of the service life of components and systems, and early identification of increased energy consumption.

OVERVIEW OF THE TECHNOLOGY

Operating principle of DriveRadar® IoT Suite for applications
